# Dohyeon Lee

Email: dohyeon@postech.ac.kr | Webpage: dohyeon-lee.github.io | Scholar: clink

## EDUCATION

**Pohang University of Science and Technology – POSTECH** *Pohang, South Korea*
BS in Convergence IT Engineering Mar 2020 – Current
GPA:3.78/4.3, Major:3.93/4.3

## PUBLICATIONS

* indicates equal contribution.

**ComPose: When to Trust Hands for Object Pose Tracking**
J. Shin, J. Lee, J. Lee, I. Bae, **D. Lee**, H. Im, Y. Lee, H. Jeon
Conference on Neural Information Processing Systems (**NeurIPS**), 2026 Page: clink

**A highly maneuverable flying squirrel drone with agility-improving foldable wings**
**D. Lee***, J. Kang*, S. Han
IEEE Robotics and Automation Letters (**RA-L**), 2025 Page: clink

**A Highly Maneuverable Flying Squirrel Drone with Controllable Foldable Wings**
J. Kang*, **D. Lee***, S. Han
IEEE/RSJ International Conference on Intelligent Robots and Systems (**IROS**), 2023 Page: clink

## RESEARCH EXPERIENCES

**Scalable Robot Learning Lab (SRL), Seoul National Univ.** *Seoul, South Korea*
*U.G. Researcher* Mar. 2026 - current
**Supervisor: Prof. Youngwoon Lee**

**Project : SkillVLA: Sample-Efficient Vision-Language-Action Model Learning via Discrete Skill Representations**

- Propose a VLA architecture for few-shot fine-tuning on new tasks with minimal data
- Develop a continual-learning VLA that learns new tasks while minimizing catastrophic forgetting
- Learn motion priors through skills and represent each task as a combination of skills
- Validate the method in LIBERO simulation and real-world bimanual manipulation

**Computational Control Engineering Lab (CoCEL), POSTECH** *Pohang, South Korea*
*U.G. Researcher* Feb. 2022 - Feb. 2024
**Supervisor: Prof. Soohee Han**

**Project : Development of flying squirrel drone**

- Development of flying squirrel drone hardware and stabilization of low-level control system.
- Implement Kalman filter based state estimation for the developed embedded hardware.
- Implement integral backstepping based Lyapunov stable controller for drone.
- Collect data using Mocap and GPS for training neural net dynamics model.
- Implement simulation for full SE(3) dynamics model using MATLAB using ode45 integrator.

**Dynamic Robot Control and Design Lab (DRCD), KAIST** *Daejoon, South Korea*
*U.G. Researcher* Jun. 2023 - Sep. 2023
**Supervisor: Prof. Hae-won Park**

**Project : Whole-body control of quadrupedal robot with arm by off-policy RL**

- implement off-policy (SAC) and on-policy (PPO) RL to a Legged-manipulator robot in the Isaac Gym.
- Designed a learning pipeline for whole-body control of a legged-manipulator robot using a VAE and the replay buffer of an off-policy reinforcement learning algorithm.

## PERSONAL PROJECTS

**Reachability-Aware MPPI for aggressive maneuvers** Aug. 2025 - Dec. 2025

- Environment estimation from the sample history of MPPI.
- Obtain the reachable set using an empirical gramian based method.

**Sloshing control with Physics-Informed RNN by 6-axis manipulator** Aug. 2023 - Feb. 2024

Related achievement: *$1^{st}$ place* in 2023 Undergraduate Group Research Program(UGRP), POSTECH

- Development of 6-axis manipulator hardware and stabilization of low-level control system.
- Proposal and Implementation of a Physics-Informed RNN for water state observer.
- Implement LQR controller and velocity motion planning of manipulator for water sloshing control.

**Quadruped-wheel robot control with impedance control** Jun. 2021 - Feb. 2022

Related achievement: *$1^{st}$ place* in 2021 Undergraduate Group Research Program(UGRP), POSTECH

- Development of quadruped-wheel robot hardware and stabilization of low-level control system.
- Application of impedance control to the robot legs.

## AWARDS AND SCHOLARSHIPS

***$2^{nd}$ place* in 2024 Military AI Contest**, Ministry of National Defense 2024
Chief of Naval Operations Award
5K USD

***$1^{st}$ place* in 2023 Undergraduate Group Research Program(UGRP)**, POSTECH 2023
Subject: Sloshing control with Physics-Informed RNN by 6-axis manipulator
2.1K USD

***$1^{st}$ place* in 2022 Undergraduate Group Research Program(UGRP)**, POSTECH 2022
Subject: Flying Squirrel Biomimetic Drone
2.1K USD

***$1^{st}$ place* in 2021 Undergraduate Group Research Program(UGRP)**, POSTECH 2021
Subject: Quadruped-wheel robot control with impedance control
2.1K USD

**Creative IT Engineering Scholarship**, Korea Government 2020
8.3K USD

## SKILLS

C++, C, Python, MATLAB

Isaac gym, Issac sim, ROS1, ROS2, Pytorch, Git

## OTHER ACTIVITIES

**Military Service**, Korean Army Jul. 2024 - Dec. 2025

**President of Robot Central Club**, POSTECH Jun. 2022 - Jun. 2023
